5.7	The treating doctor should mention the indication in the drug chart for all in-patients	Doctor
5.8	In case of a medicine having two or more drugs (tablet/capsule/injection) the dose of all the individual drugs should be written. For example, in a combination of CLOPIDOGREL with ASPIRIN the dose of both the drugs should be written as 75 mg + 75 mg or as 75 mg + 150 mg. This is not necessary for preparations having a combination of vitamins and/or minerals. Similarly, if the combination of medication comes only in one strength, it is not necessary.	Doctor
5.9	The treatment order should be written daily.	Doctor
5.10	Abbreviations should be used as per the standardized list of approved abbreviations for medications throughout the hospital	Doctor
5.11	The treating doctor must write his/her full name and date for each medication prescribed by him/her in the drug chart of all in-patients. In case of out-patients, the treating doctor should write his/her name and date after completion of the prescription.	Doctor
5.12	A doctor should not recommend prescription medicines over the telephone or SMS messages to his patients.	Doctor
5.13	Doctors should be doubly careful in writing the potency & quantity of the medication(s). It is advisable to write the quantity in words as good practice so that the numbers cannot be manipulated. (Example: When prescribing insulin dose write 10 units not 10 U)	Doctor
